

Installation test for Git etc on Windows

Joe Hannon, 11 September 2026

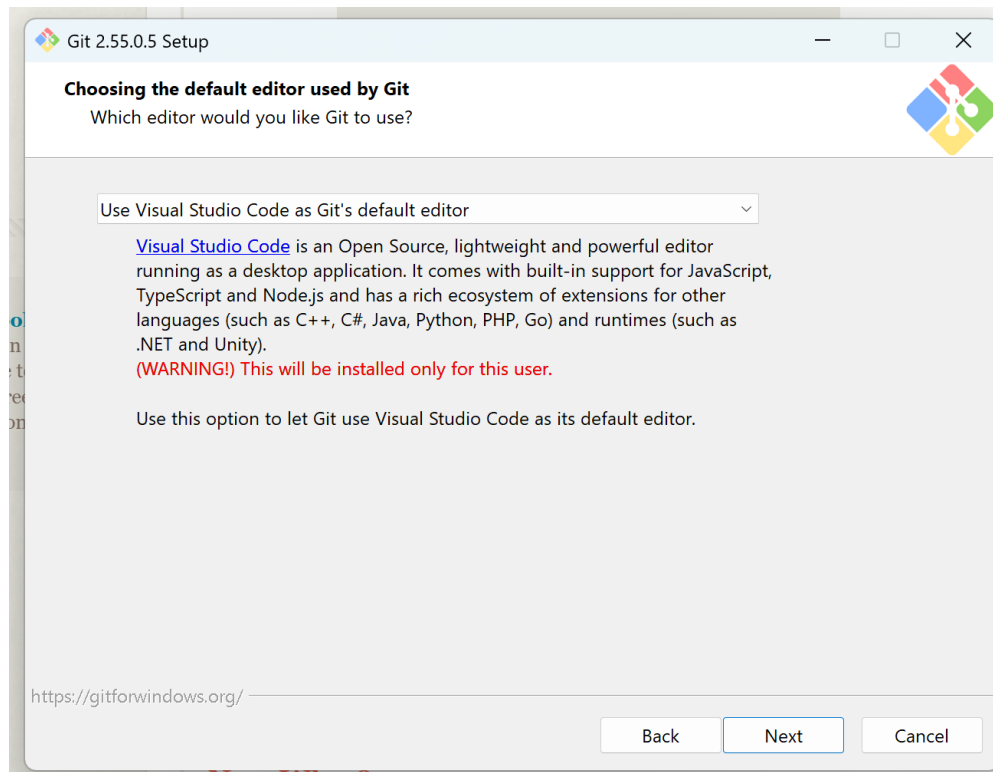

In VS Code:

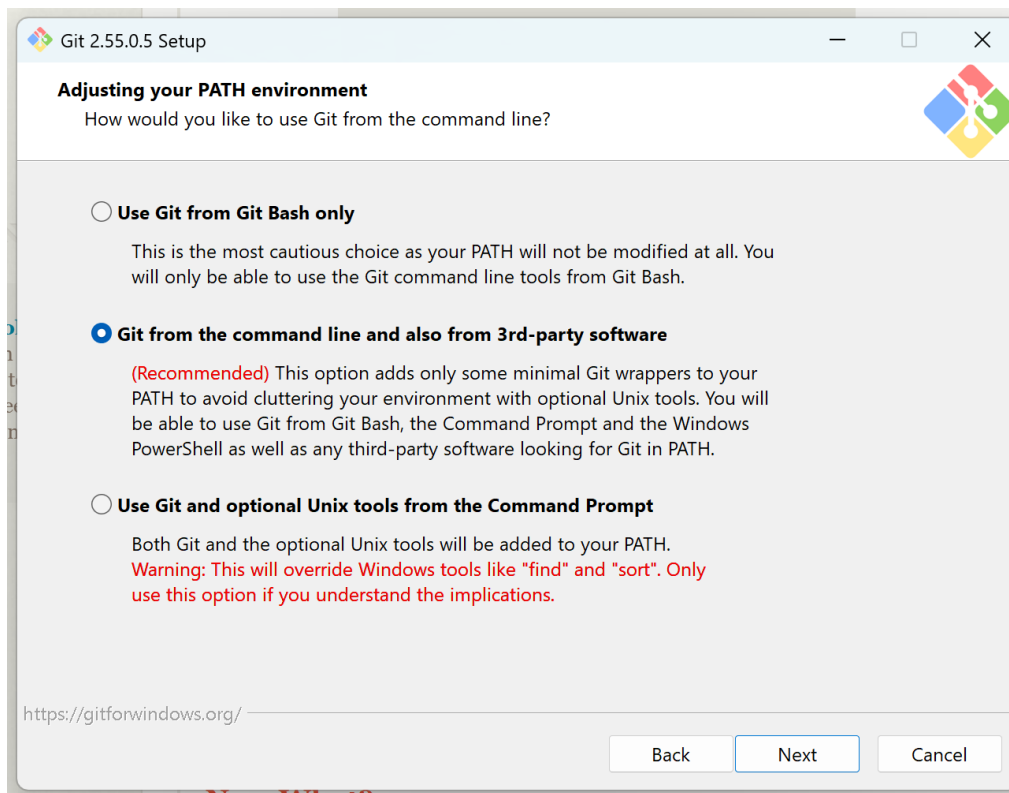

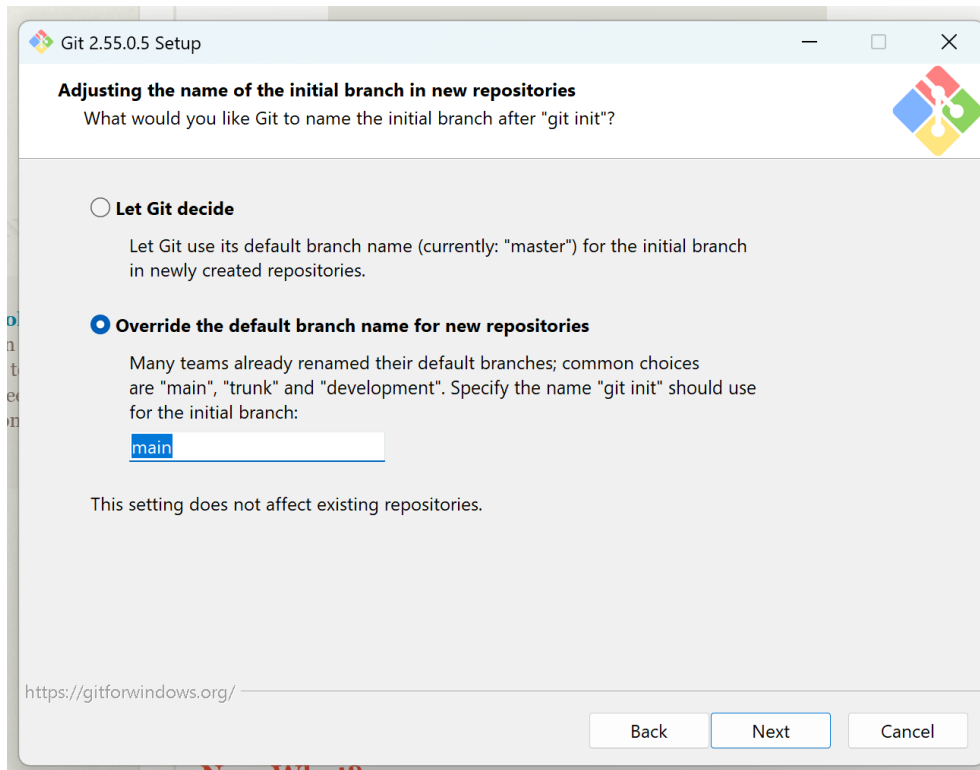

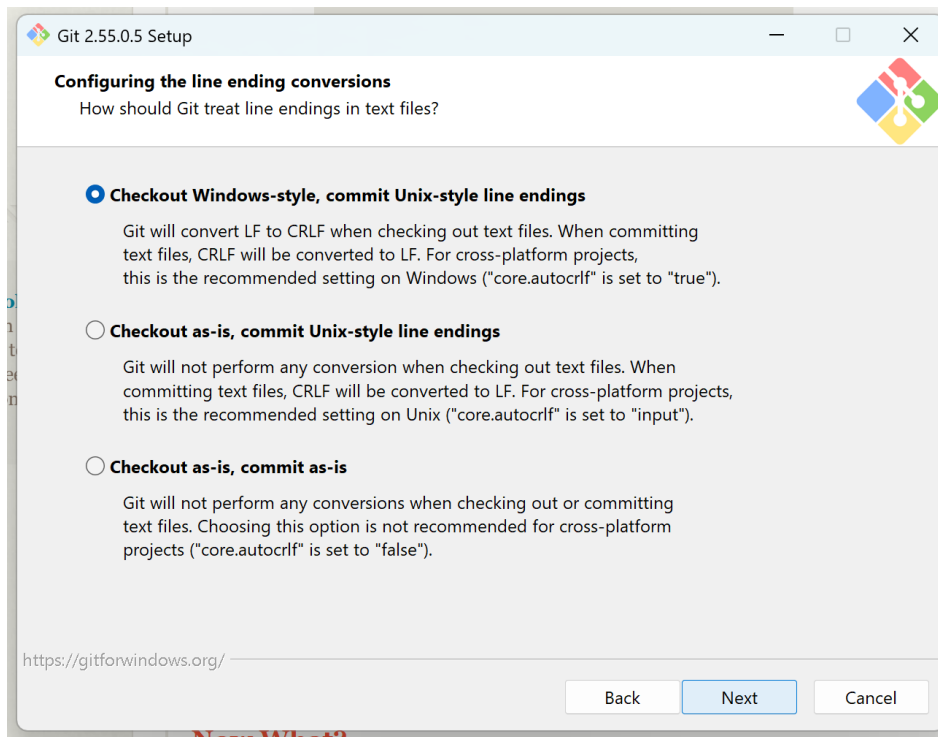

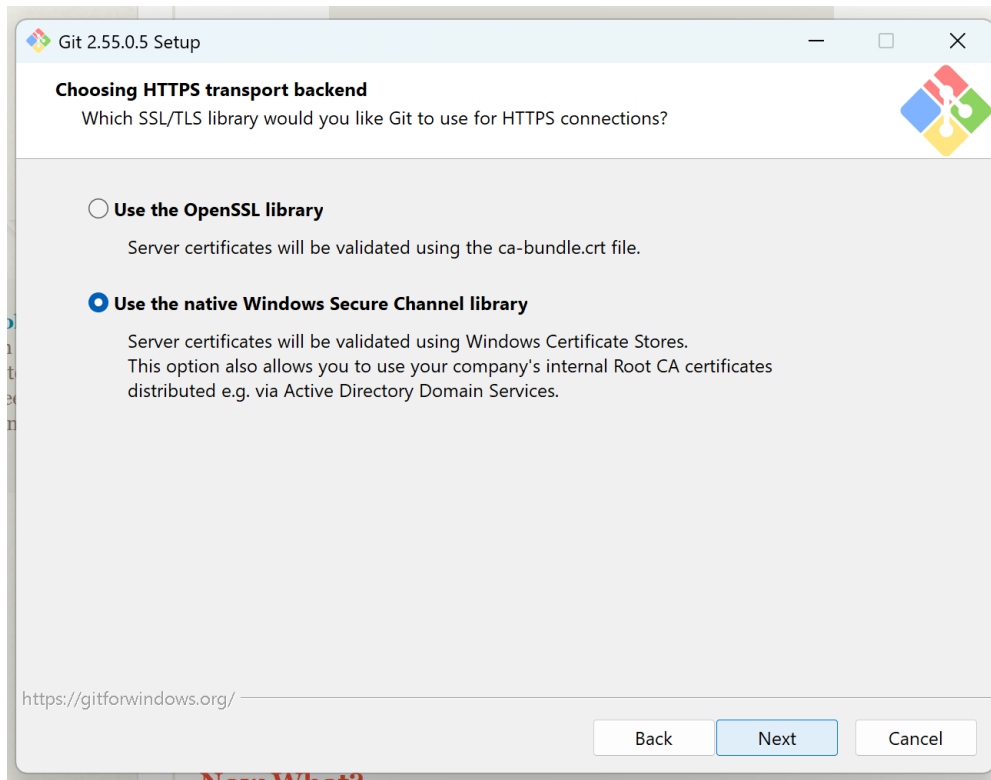

Leads here:

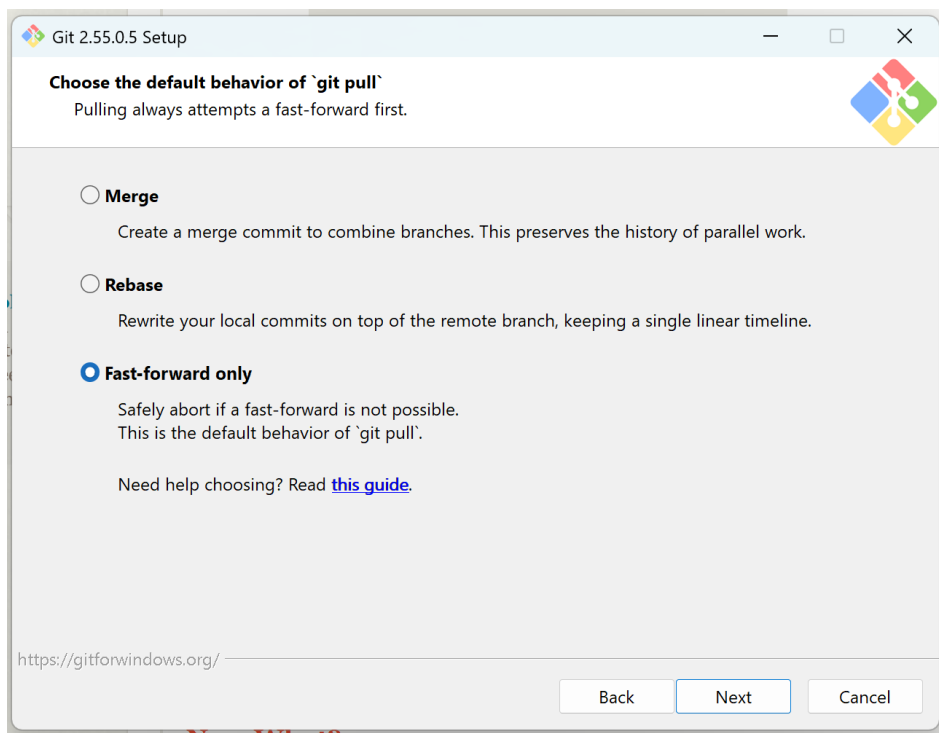

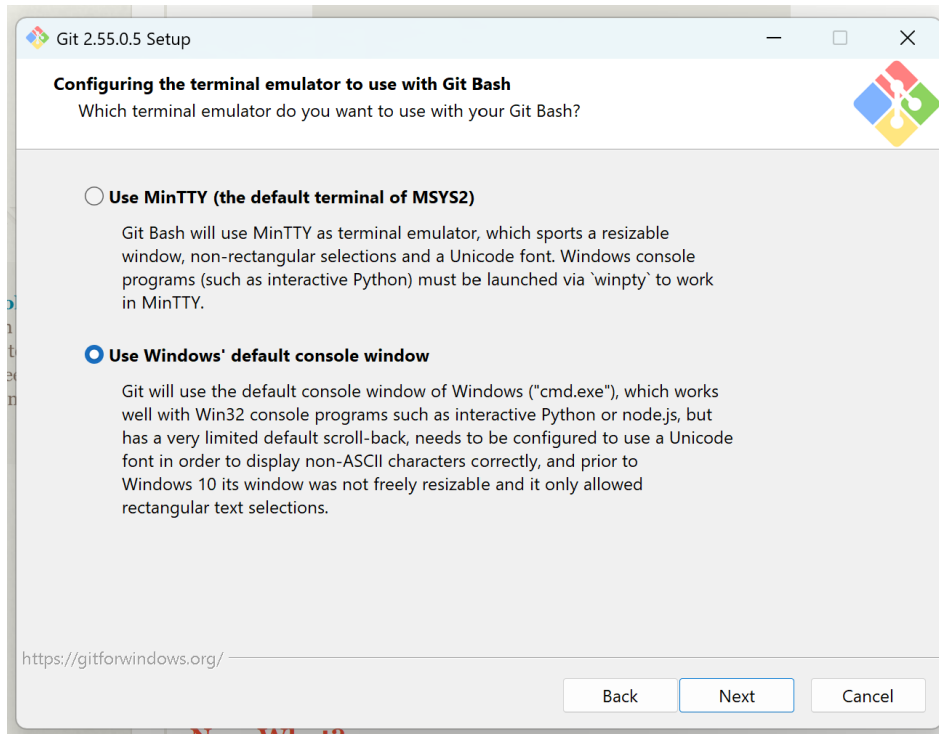

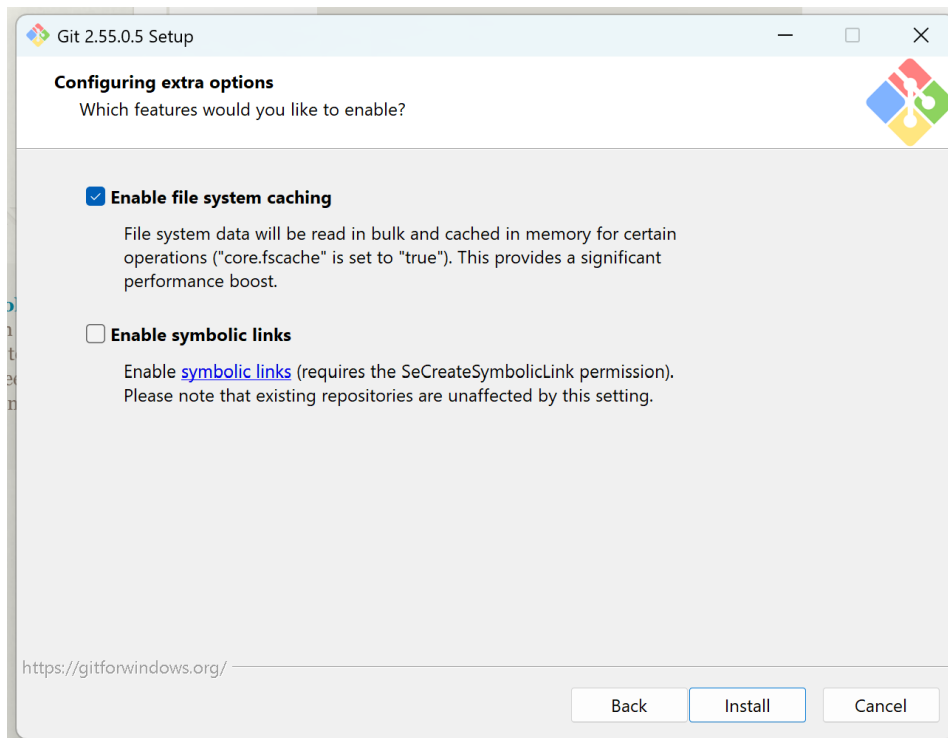

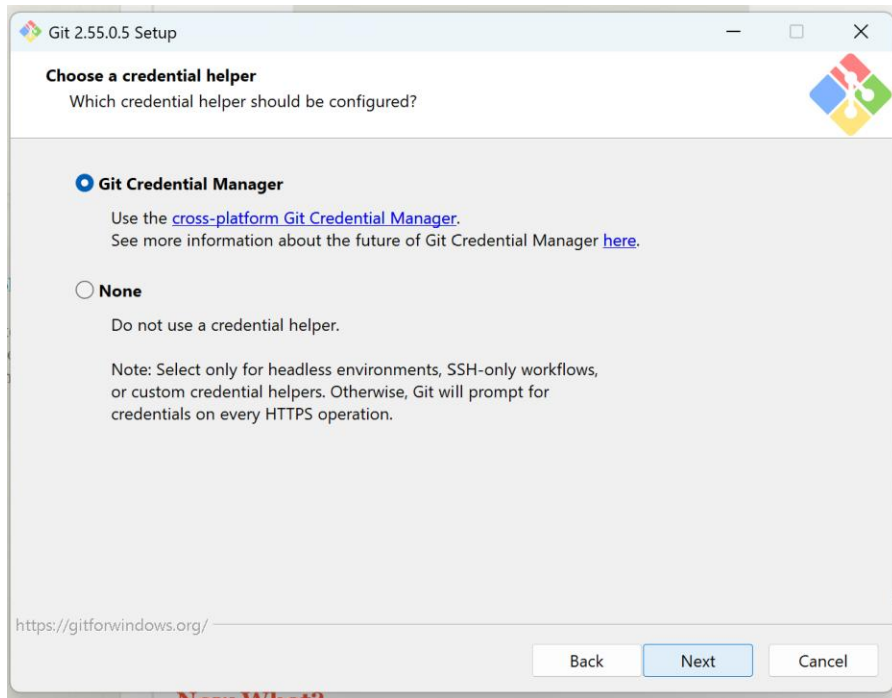

Was not expecting soooo many questions:

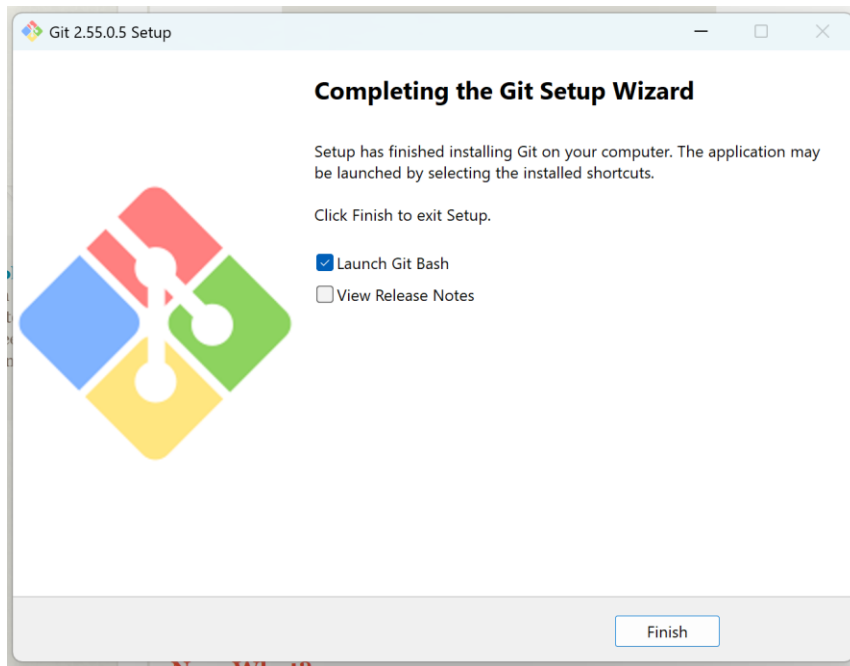

Signed into VS Code using my GitHub account

Sign in with GitHub (opened browser)

Authorize Visual Studio Code

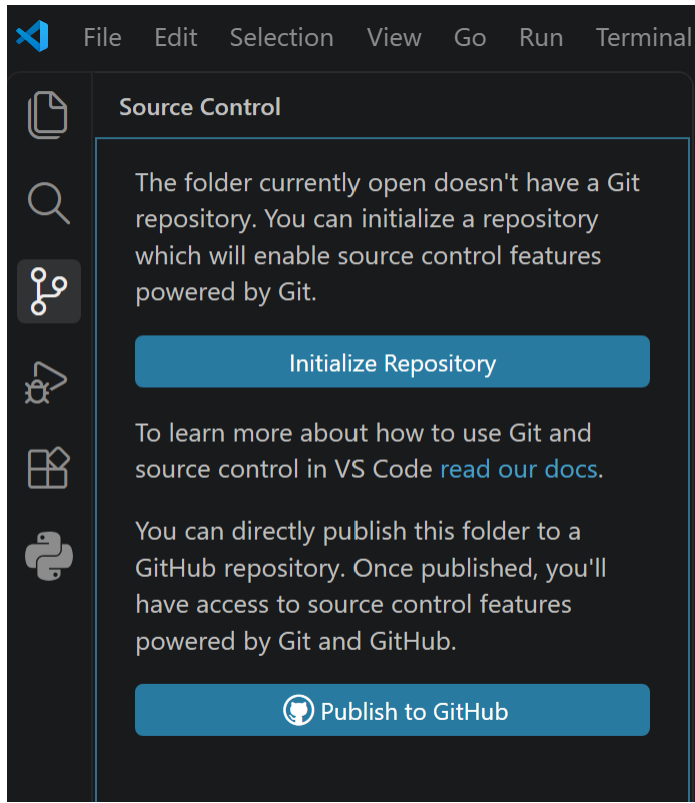

From the options below, choose which account you would like to use to authorize this app.

or

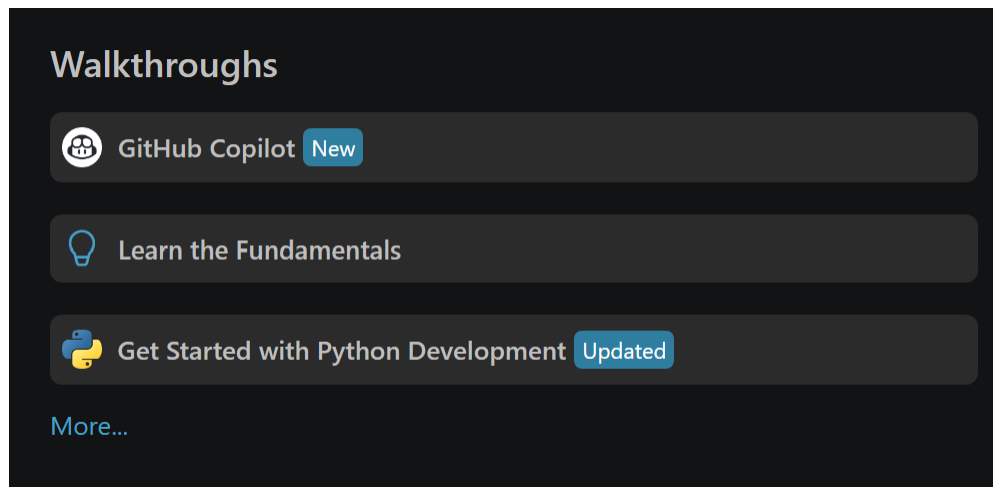

Afterwards, back in VS Code:

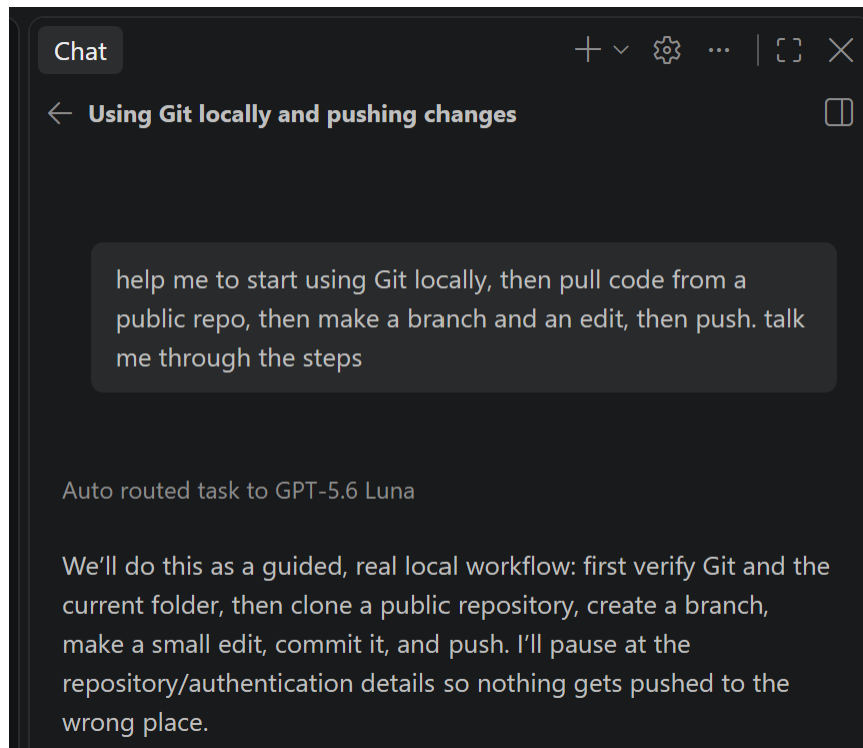

I did not click on either of these.

Didn't look at these but they could be helpful:

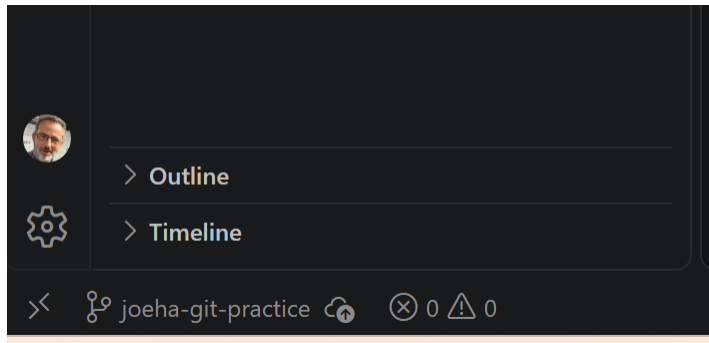

The Chat window was open on the right and I felt like having a conversation:

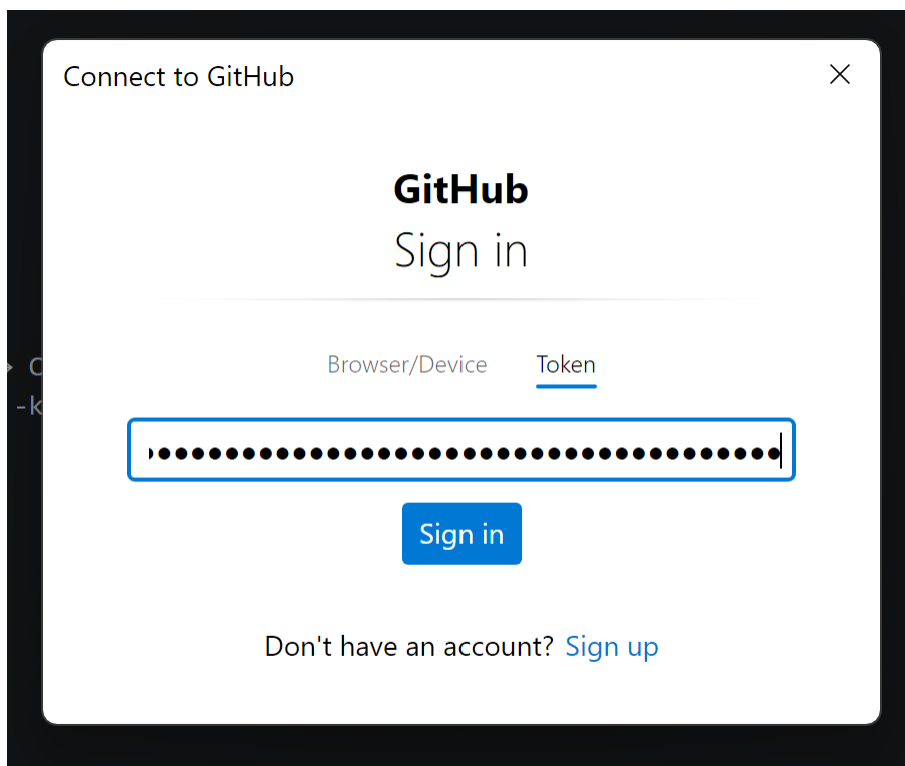

I let CoPilot do its thing for a few turns. It asked me the address of the GitHub repo and I gave it the info needed... https://github.com/CHEN30010/Getting_Started

Bottom left of my screen showed the branch created and opened locally

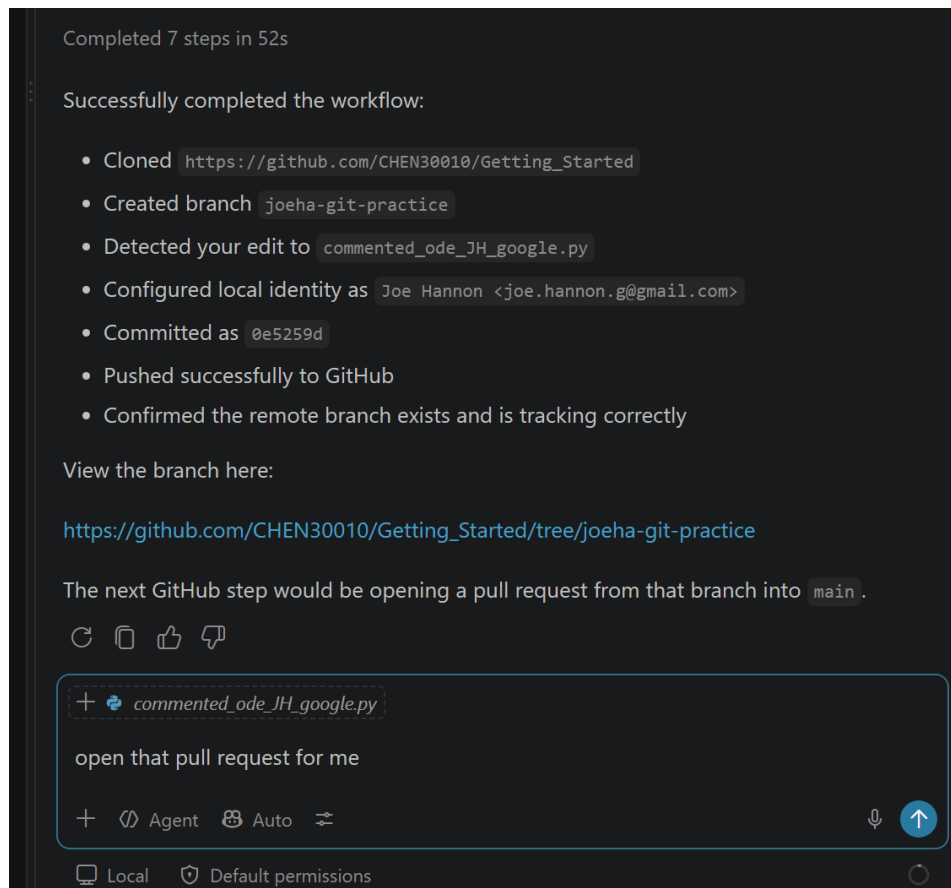

I opened one of the Python files and made a small edit, then saved it locally using Ctrl+S.

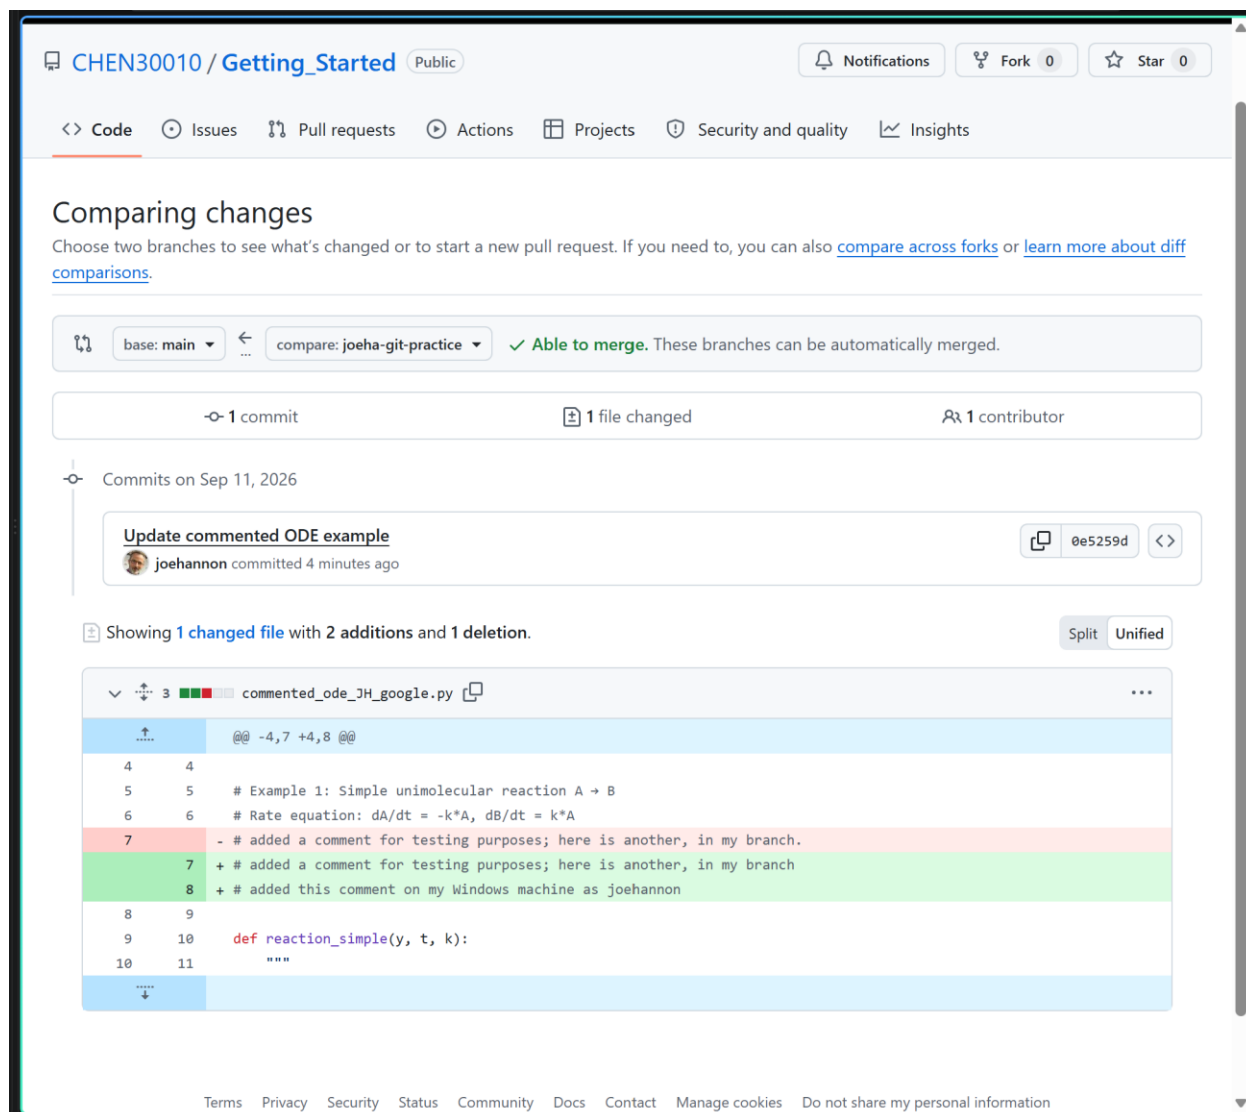

Getting ready to push to GitHub, as I hadn't installed the GitHub CLI yet, I had to authenticate like this:

Guided by the Chat, I ended up here:

Again, not having the CLI, I had to use the browser for a bit – not the usual workflow:

Mostly I clicked buttons that were green to make and merge the pull request.

I clicked to delete the branch I worked on from GitHub.

13

Some of the Git commands the Chat issued were ugly because Git had not been added by the installer to my path. Not knowing exactly how best to do that, I asked the Chat to do it for me:

Now I wanted to do the full cycle on my own (OK, with hints from the Chat):

I asked the Chat for a summary of the commands it had run on my behalf:

```
git clone <repo-url>
```

```
git switch -c joeha-git-practice
```

```
git status
```

(I made my edit locally)

```
git diff
```

```
git config user.name "Joe Hannon"
```

```
git config user.email "joe.hannon.g@gmail.com"
```

```
git add commented_ode_JH_google.py
```

```
git commit -m "Update commented ODE example"
```

```
git push -u origin joeha-git-practice
```

(gh pr create – what I had to do in the browser, without the GitHub CLI)

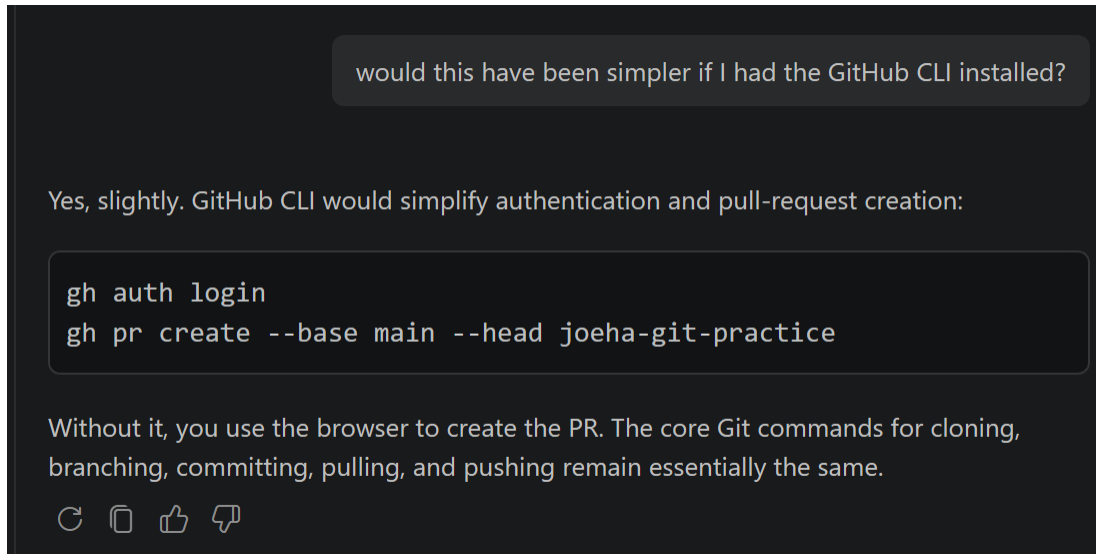

(I merged the pull request in the browser and deleted the temp branch from GitHub – that is normal)

```
git switch main
```

```
git pull origin main
```

```
git branch -d joeha-git-practice
```

Keen to improve and learn, I asked the Chat:

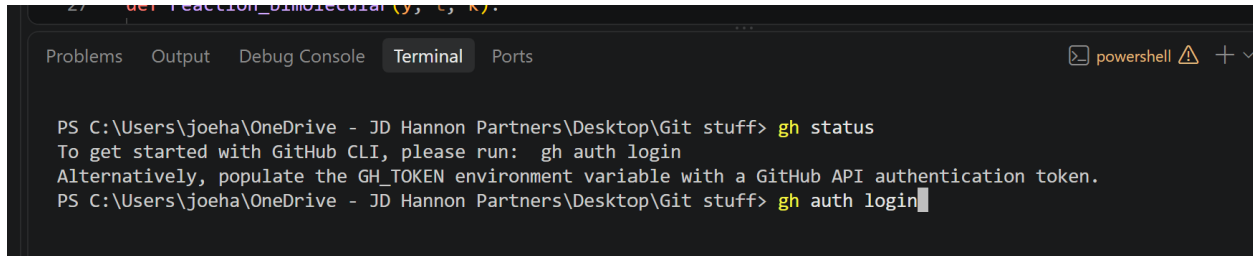

So I installed the CLI. I used winget, which seemed to be available on my windows machine:

```
winget install --id GitHub.cli --source winget
```

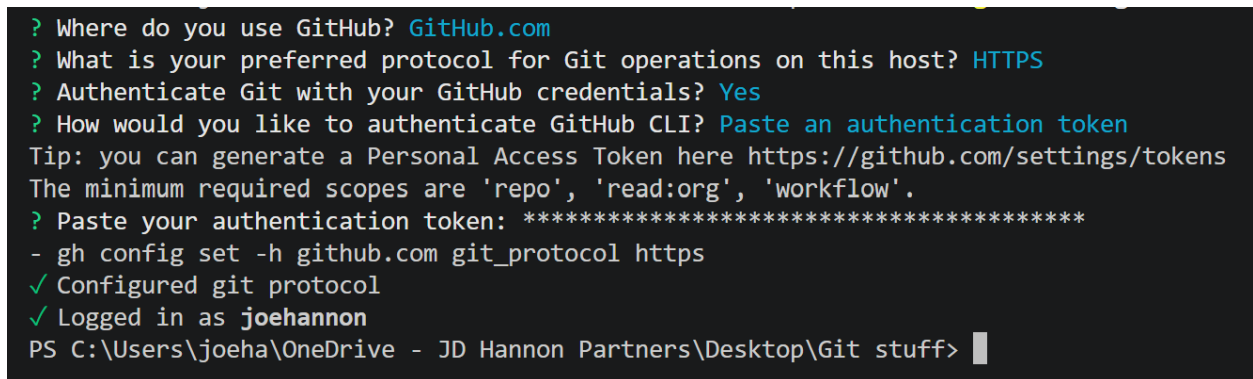

I pasted the above command in a Terminal window. A terminal window is available at the bottom of the VS Code window usually, just drag up a horizontal bar at the bottom and it will appear.

Then I authenticated on GitHub using the terminal window instead of the browser.

```
PS C:\Users\joeha\OneDrive - JD Hannon Partners\Desktop\Git stuff> gh status
To get started with GitHub CLI, please run: gh auth login
Alternatively, populate the GH_TOKEN environment variable with a GitHub API authentication token.
PS C:\Users\joeha\OneDrive - JD Hannon Partners\Desktop\Git stuff> gh auth login
```

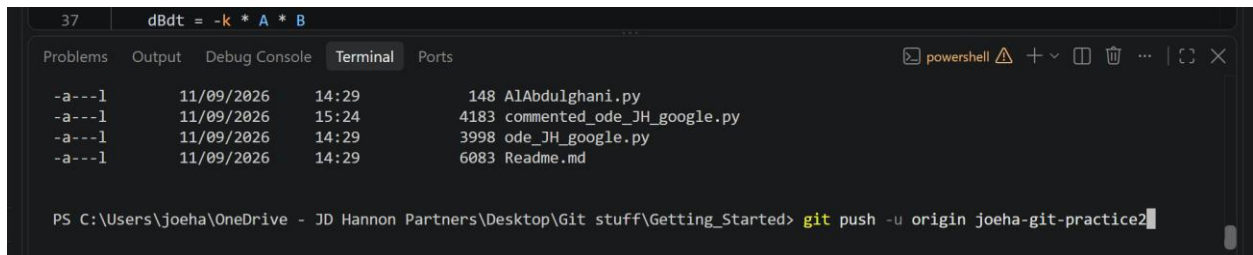

There were a few questions to answer and then I pasted my GitHub personal access token:

```
? Where do you use GitHub? GitHub.com
? What is your preferred protocol for Git operations on this host? HTTPS
? Authenticate Git with your GitHub credentials? Yes
? How would you like to authenticate GitHub CLI? Paste an authentication token
Tip: you can generate a Personal Access Token here https://github.com/settings/tokens
The minimum required scopes are 'repo', 'read:org', 'workflow'.
? Paste your authentication token: *****
- gh config set -h github.com git_protocol https
✓ Configured git protocol
✓ Logged in as joehannon
PS C:\Users\joeha\OneDrive - JD Hannon Partners\Desktop\Git stuff>
```

I closed and then reopened VS Code to make sure it “knew” about the installation I just did.

[I then repeated the whole git and github cycle manually typing the git (and gh CLI) commands in my terminal window inside VS Code:

```
37 d8dt = -k * A * B
Problems Output Debug Console Terminal Ports
-a---l 11/09/2026 14:29 148 AlAbdulghani.py
-a---l 11/09/2026 15:24 4183 commented_ode_JH_google.py
-a---l 11/09/2026 14:29 3998 ode_JH_google.py
-a---l 11/09/2026 14:29 6083 Readme.md

PS C:\Users\joeha\OneDrive - JD Hannon Partners\Desktop\Git stuff\Getting_Started> git push -u origin joeha-git-practice2
```

]

At the end I checked to see how much of my Chat credits for September had been used up:

The screenshot shows the 'Copilot Free' settings panel in a dark-themed application. At the top right is an 'Upgrade' button and a settings icon. The panel lists several features with their usage status and reset dates (all set to 'Resets Oct 1 at 1:00 AM').

Feature	Usage	Status	Reset Date
Credits	3% used		Resets Oct 1 at 1:00 AM
Inline Suggestions	1% used		Resets Oct 1 at 1:00 AM
Inline Suggestions	>	Enabled	
Codebase Semantic Index	Index?	Not indexed	
Session Sync	Enable?	Not enabled	

At the bottom of the panel, a tooltip points to the Copilot icon in the status bar. The status bar itself shows 'UTF-8', 'CRLF', '{ }', 'Python', the Copilot icon, and 'Python 3.14 (64-bit)'.
